Connect by Name

NLNETLABS

Benno Overeinder

What does it mean to setup a connection?

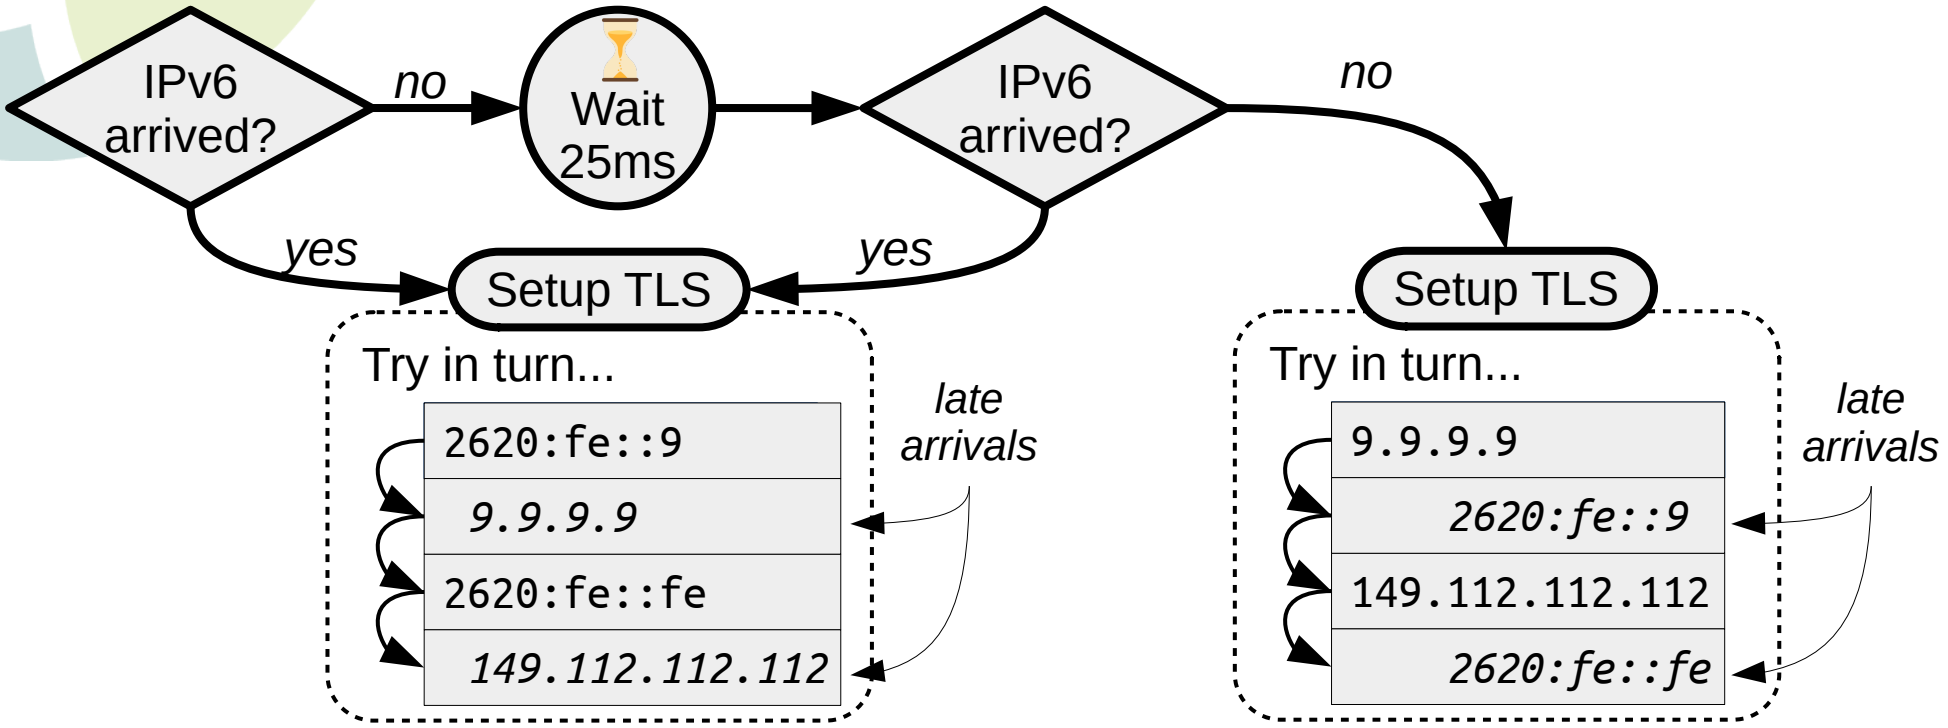
- Using modern standards...
- Securely
- Privately

```
c = connectByName(“dns.quad9.net”, “doh”);
```

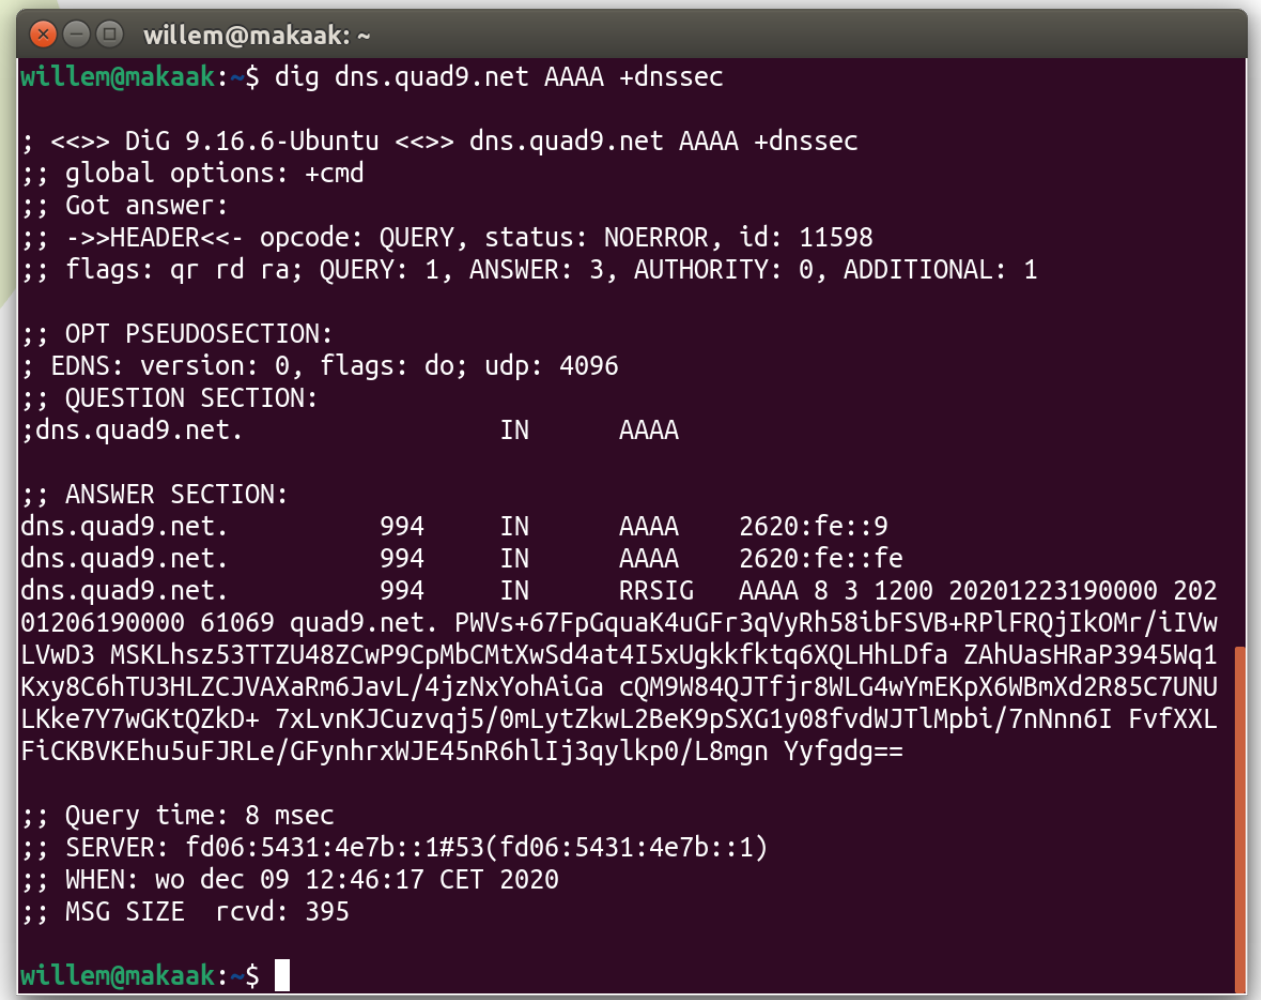
Step 1: Happy Eyeballs

- Lookup IPv6 of `dns.quad9.net`
- Lookup IPv4 of `dns.quad9.net`

} *Simultaneously*



DNSSEC



willem@makaak: ~
willem@makaak:~$ dig dns.quad9.net AAAA +dnssec
; <<>> DiG 9.16.6-Ubuntu <<>> dns.quad9.net AAAA +dnssec

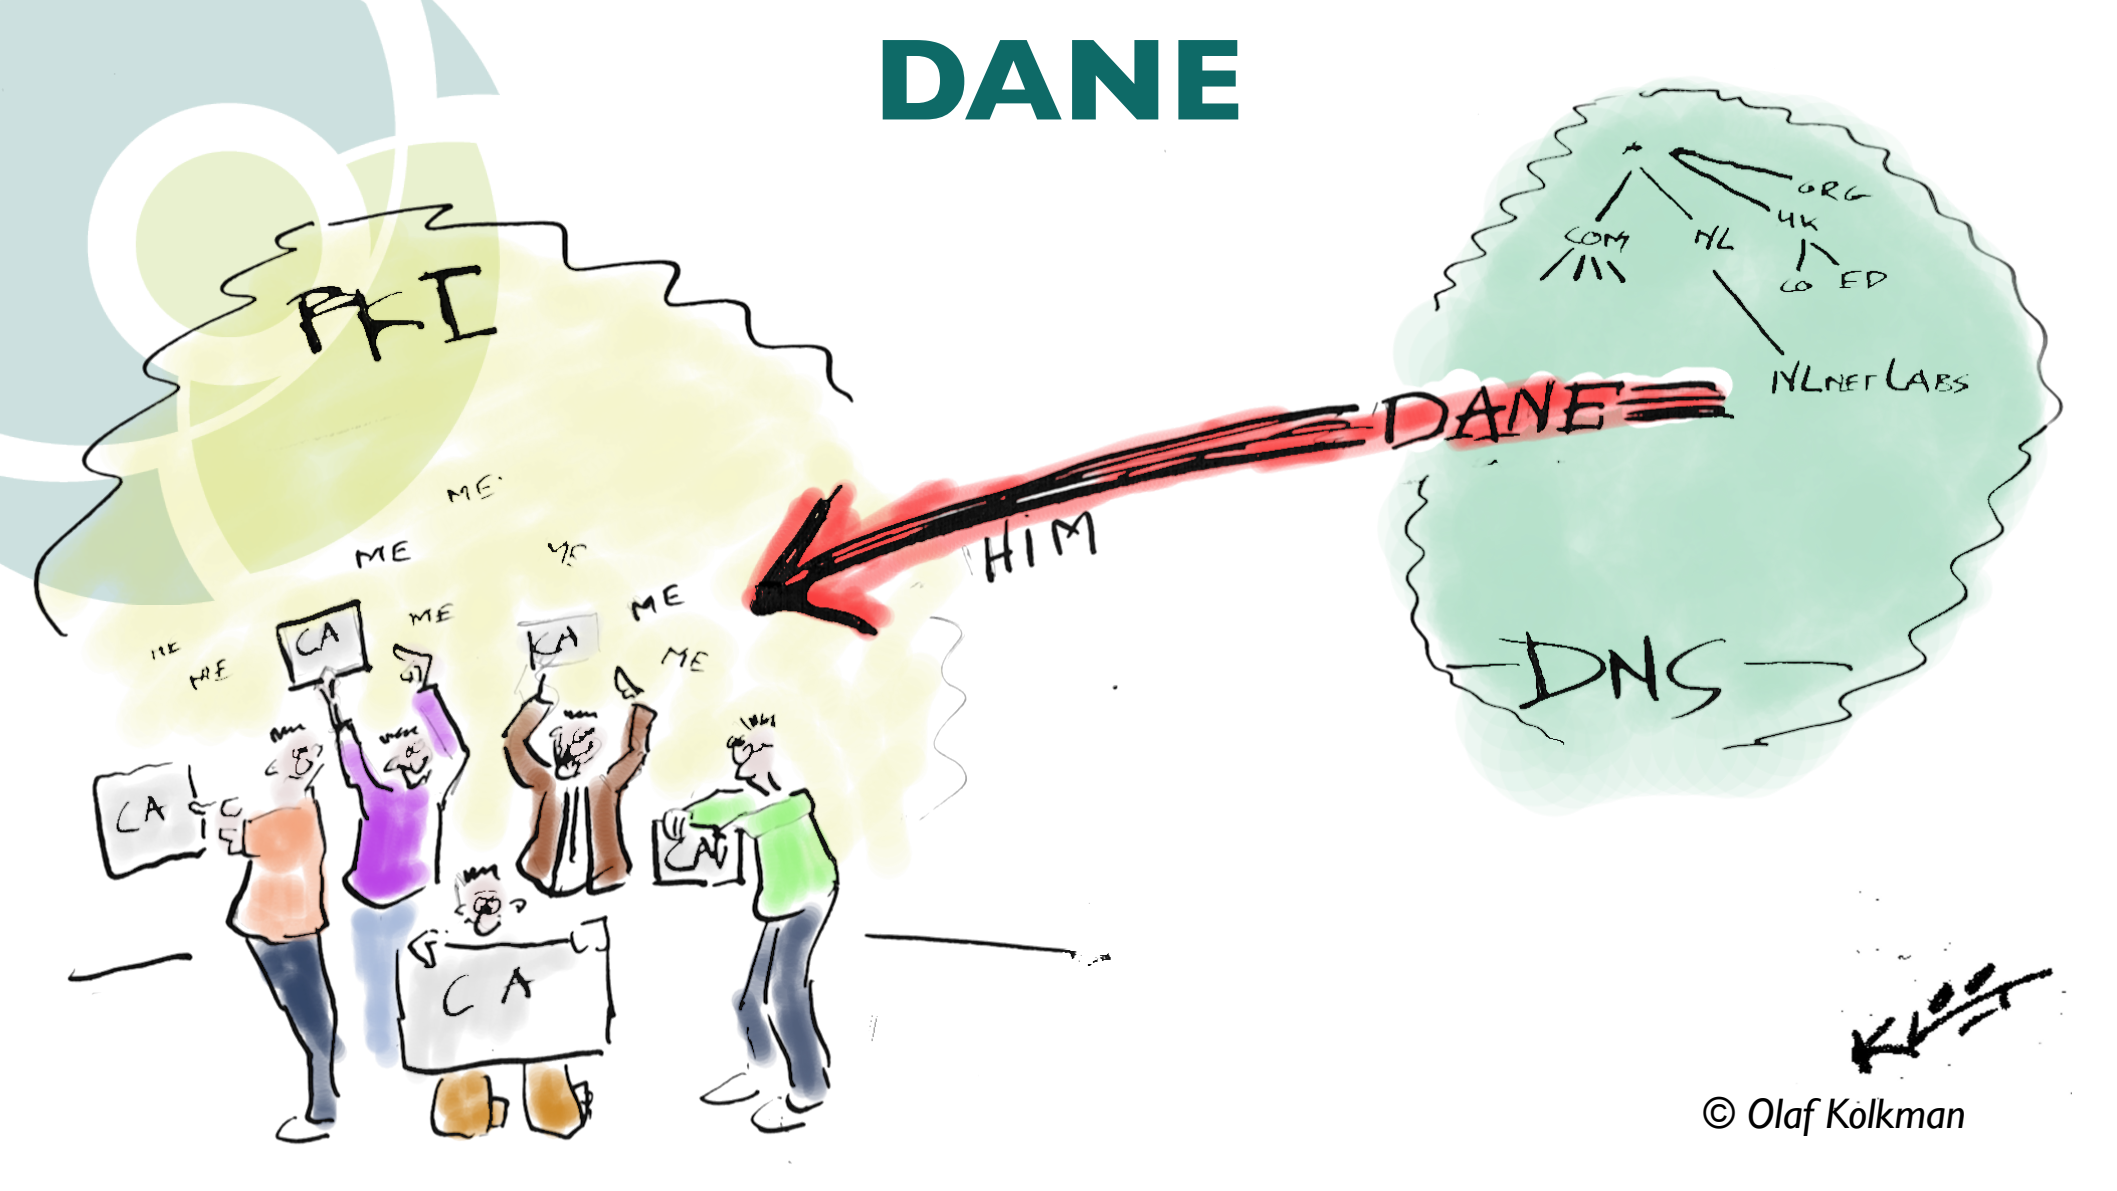
DANE

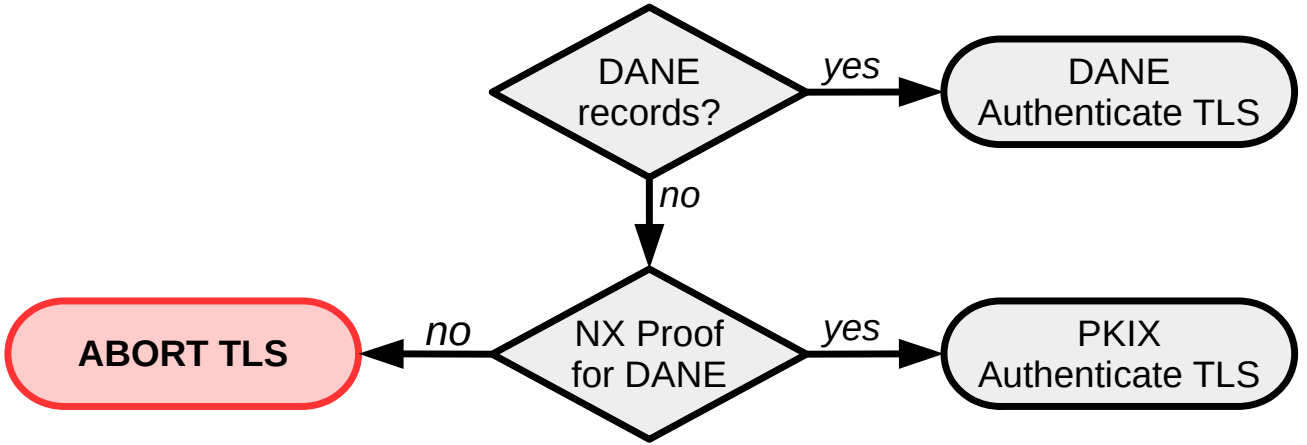


Happy Eyeballs, DNSSEC & DANE

Step 1:

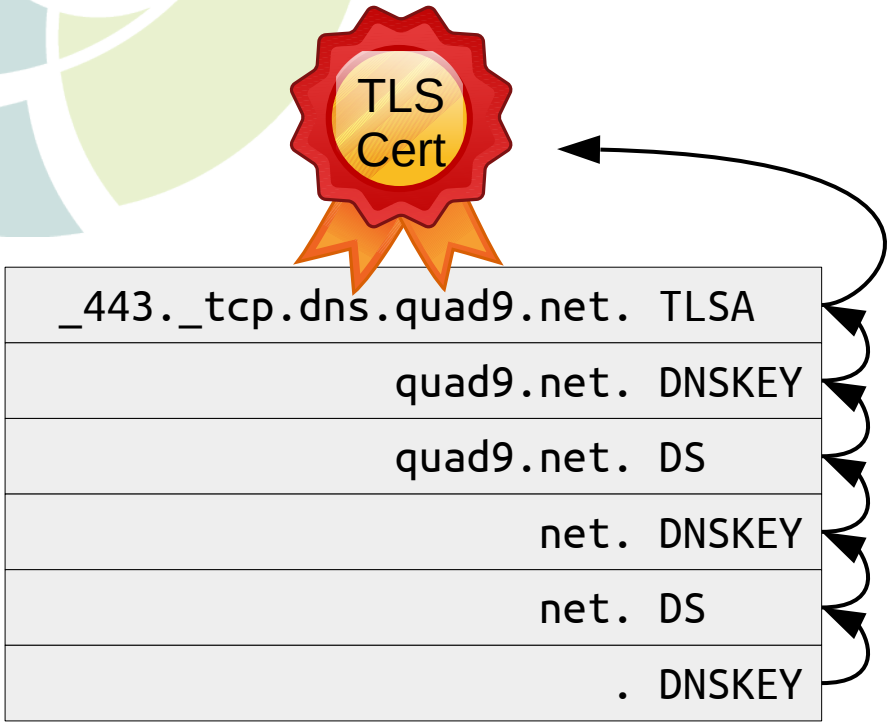
- Lookup IPv6 of `dns.quad9.net +dnssec`
- Lookup IPv4 of `dns.quad9.net +dnssec`
- Lookup `_443._tcp.dns.quad9.net TLSA +dnssec`

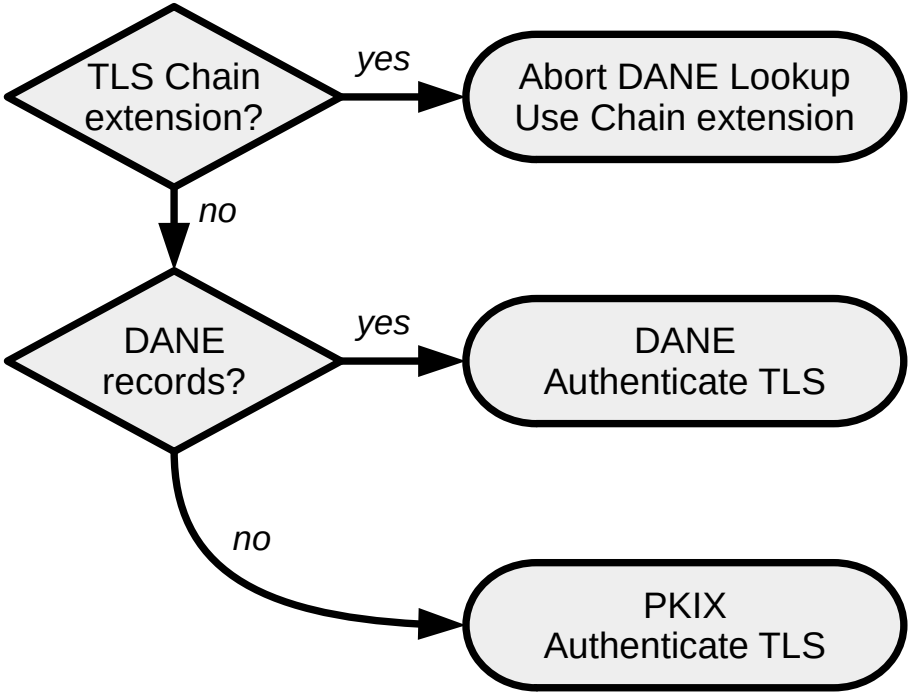
} *Simultaneously*



DNSSEC Chain TLS Extension

- DANE Embedded in the TLS Handshake:





Zero config DNSSEC

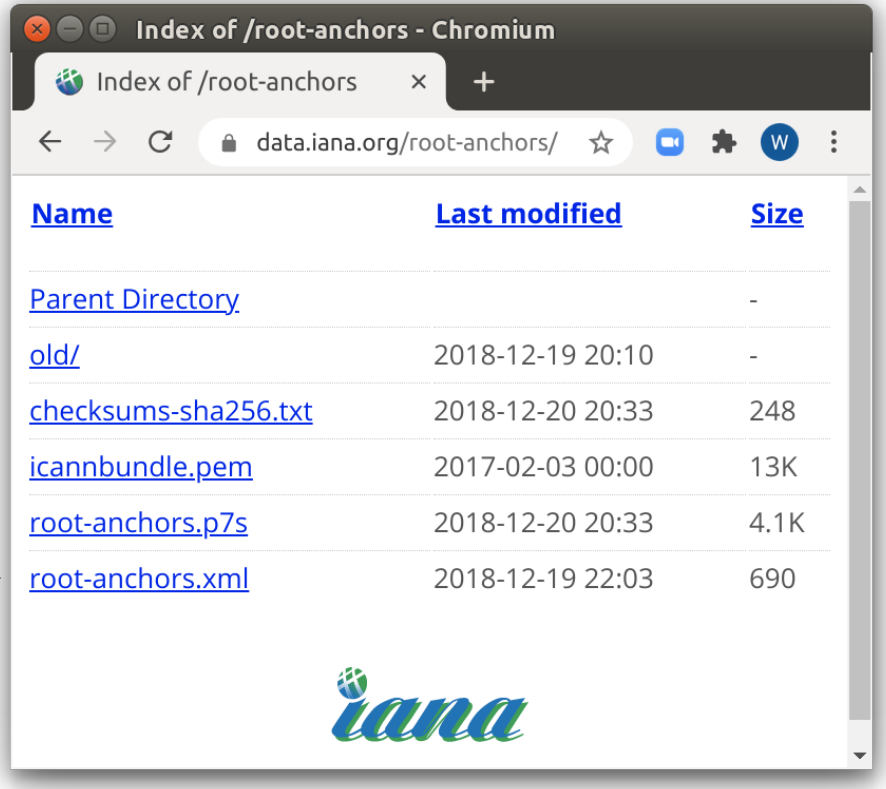
System requirement for DNSSEC:

root KSK

validate with ICANN CA

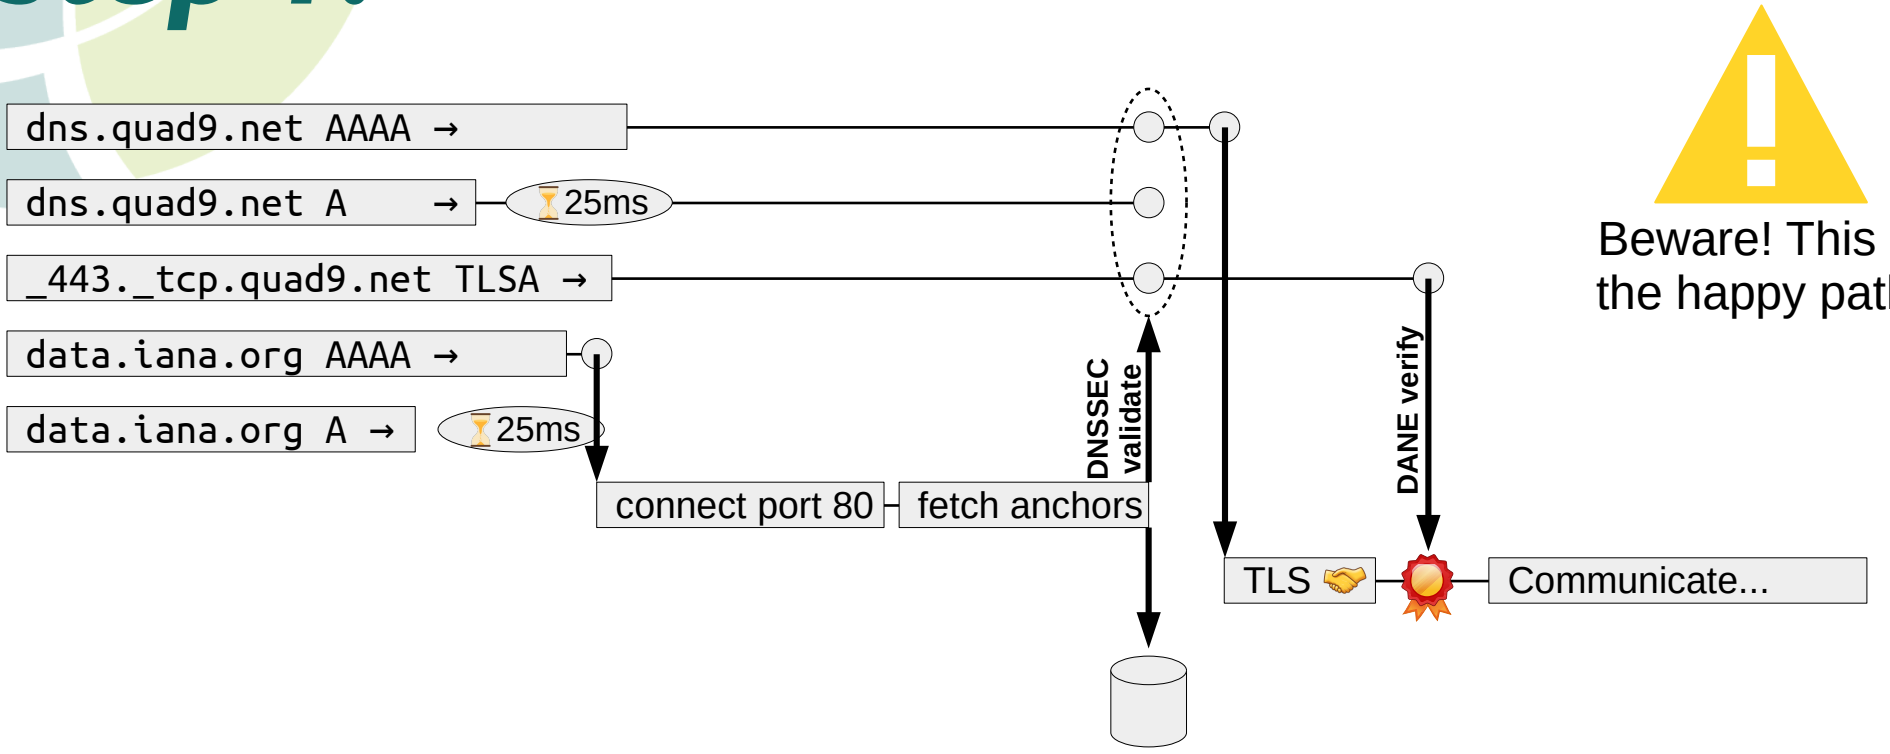
Alternatively, from application fetch:

RFC7958



Happy Eyeballs, DNSSEC & DANE + fetching/renewing DNSSEC TA

Step 1:



DNS-over-TLS (DoT)
DNS-over-HTTPS (DoH)

- Do all DNS lookups ***privately***
- Setting up DoT or DoH in itself involves:
  - Happy Eyeballs
  - DANE Authentication
    - With DNSSEC Chain, or
    - DANE records acquired over the as of yet unauthenticated DoT or DoH session

Much, much, more ...

- DNSSEC Roadblock avoidance RFC8027
- DNSSEC with DNS64 / NAT64 RFC7050
- DNS-over-Quick (DoQ)
- Oblivious DNS-over-HTTPS (ODoH)
- Multiple Provisioning Domains RFC7556
- etc.

What does it mean to setup a connection?

- Using modern standards...
- Securely
- Privately

What is Connect by Name?
