NEXT GENERATION INTERNET

NGI 4ALL

D4.2 NGI MEDIA DATABASE

Revision: v.1.0

Work package	WP4
Task	4.2
Due date	31/12/2019
Submission date	22/01/2020
Deliverable lead	Tipik
Version	1.0
Authors	Marie-France Locus, Leo Mallet, Erik Morren (Tipik)
Reviewers	Margherita Trestini, Monique Calisti (Martel)

Abstract	This deliverable consists in a dedicated NGI media database composed of journalists from specialist and mainstream media active at pan-European level. Notice that the database will be continuously enriched.
Keywords	Media, Press, Communication, Next Generation Internet, Journalist, database, Dissemination

DISCLAIMER

The information, documentation and figures available in this deliverable are written by the "Next Generation Internet for All - Promoting Global Visibility on the Human-Centric Internet" (NGI4ALL) project's consortium under EC grant agreement 825354 and do not necessarily reflect the views of the European Commission.

The European Commission is not liable for any use that may be made of the information contained herein.

COPYRIGHT NOTICE

Project co-funded by the European Commission in the H2020 Programme		
Nature of the deliverable:	**to specify R, DEM, DEC, OTHER***	
Dissemination Level		
PU	Public, fully open, e.g. web	
CL	Classified, information as referred to in Commission Decision 2001/844/EC	
CO	Confidential to NGI4ALL project and Commission Services	

* R: Document, report (excluding the periodic and final reports)

DEM: Demonstrator, pilot, prototype, plan designs

DEC: Websites, patents filing, press & media actions, videos, etc.

OTHER: Software, technical diagram, etc.

EXECUTIVE SUMMARY

The objective of the media strategy is to build a strong reputation and global visibility on the human-centric Internet debate, reinforcing the existing roster of stakeholders and gaining additional ones that will contribute to the development of a human Internet by creating the proper technological, political and socio-economic conditions. Via a combination of dedicated online and offline activities through a 360 degrees approach, the aim is to ensure increased impact for all NGI initiatives and broad outreach to people at large.

In this context, the media database is a key element for the outreach activities.

The goals of this document are therefore to:

- Explain the steps and methodology in developing the NGI Media database

- Present the media database

- Describe the next steps

This deliverable is organised as follows:

- Section 1 provides background information and methodology used to build the NGI media database

- Section 2 provides the NGI database in a table format

- Section 3 includes the next steps and objectives for year 2

- Section 4 concludes the document

Since NGI objectives, activities and targets are multiple, the typology of targeted media needs to be adapted to topics covered by the initiative (both at the European and national levels) and to national media realities. It is reflected in the media database.

TABLE OF CONTENTS

1   BACKGROUND INFORMATION AND METHODOLOGY

1.1   WHAT IS THE NGI MEDIA DATABASE

The NGI media database includes the key media contacts who would be interested in stories about the Next Generation Internet. These media contacts include journalists, reporters, bloggers, producers, freelance writers and editors across print, online, blogs, radio and television.
It is used for sending information and press releases about NGI story, events, activities and funding opportunities.

1.2   METHODOLOGY

1.2.1   Defining keywords, interests, audience

The definition of keywords, areas of interest and fields of activity was designed to closely map on to the core definition and scope of the Next Generation Internet initiative: the primary focus was to cover the H2020 ICT work programme 2018-2020 (WP2018-20) and the 8 calls covered by the « NGI Key Priority » and the areas they apply to, namely : Internet of Things, Artificial Intelligence, Future media, Interactive Technologies, Language technologies and inclusion.

Keyword searches via professional tools were therefore designed to «translate» call areas into areas covered by the online professional search tool. At times, the overlap between terms was complete: « Artificial Intelligence », for instance, was a specific area covered by the contact-mining software used.

In other cases, areas of interest in the contact database were selected based on how closely they matched NGI Call content : « Interactive Media », « Bluetooth », « Computer peripheral devices » and « Gadgets » were interest areas that most closely-matched the « Internet of Things » theme, for instance.

Focusing first on covering call-related content was specifically designed to reach an audience that would be potentially interested in taking part in calls and accessing funding available through NGI, thus giving contacts an extra incentive/concrete message to relay through their medium.

A second focus was then placed on broadening search areas based on the large-scale potential of NGI and future calls and development : given the extremely broad range of industries and research areas potentially impacted by NGI, a choice was made to narrow-down keywords, in order to produce a database that was still manageable, with the idea of contacting persons directly to fine-tune the database (a database that was too large in scope would have made this exercise impossible to achieve – see section 1.2.2, below).

In order to reach an audience that could feed in to the strategic, long-term aspects of NGI's development going forward, further keywords were added that covered broader areas of interest, including more « political » ones : « Europe », « Government contracting », « Internet Law », « Research », « Technology » to name a few.

Bearing in mind the approach detailed above, the following final keywords were used to create a first, broad version of the database:

- Artificial Intelligence
- Audio/Video Technology
- Blockchain
- Bluetooth
- Computer Infrastructure
- Computer Peripheral devices
- Computer-aided design
- Computer-aided engineering
- Computer-aided manufacturing
- Computers
- Consumer electronics
- Consumer electronics industry
- Disability and rehabilitation
- Distributed computing
- Europe
- Gadgets
- Government Contracting
- Information architecture
- Information design

- Information science
- Information Technology Industry
- Interactive Media
- Internet
- Internet of things
- Internet Law
- Intranets/Portals
- Media industry
- Multimedia computing
- Open hardware
- Operating Systems
- Research
- Robotics
- Scientific Research
- Tablets/mobile computing
- Technology
- Telecommunications/Electronic Communications
- Wireless computing

One further crucial aspect of our approach was creating lists of contacts based on the country they are based in: this allowed us to target our communication efforts more effectively, by translating content when necessary.

The use of language was of strategic importance, notably when dealing with countries where the NGI-related media landscape was either not sufficiently mature or in locations where issues such as Euroscepticism could hinder communication efforts. Translating into the national language often helped boost the reception of the message being communicated to a given contact.

Bearing the very broad scope of NGI and the large number of industries and research areas that could be impacted in the future, a great number of keywords could be used to expand and/or fine-tune the existing database in the future.

Areas such as « Green technology », « Design engineering », « Local government and politics », « Biomedical engineering » could all easily be added to boost the number of contacts going forward.

Another strategy envisaged is to group keywords based on the nature of the communication effort being carried out: for instance, if a call or event was centred around a particular theme, it would be possible to quickly generate a smaller, focused database that matches this area more closely than the large, more « general » database.

This will be the next steps for the year to come to broaden and extend the media database.

1.2.2   Research media outlets online and via Cision

Researching media outlets was a two-pronged effort, combining the use of professional media database tools (namely Cision) and coupling these searches with online examination of media outlets (both specialised and more general in scope) to pare-down the huge amounts of contacts generated at first and ensure there was a correct match between the names generated by the software and NGI's scope and priorities on the other.

First, each profile generated was pitted against their particular field of expertise: for instance, contacts generated via the inclusion of the "Europe" keyword included a large number of foreign correspondents who were specialised in strictly political matters (International finance or political relations between the EU and Russia, for instance). A first curation of the list could therefore be carried out solely based on these profiles, pruning the database to only keep the contacts that could maximise the impact of any communication effort led by the NGI Outreach Office.

Second, special attention was paid to the outlet a contact was working for: this meant visiting the outlet online and seeing if the content matched NGI themes and priorities. Sometimes the articles of a specific contact could be viewed to judge whether they covered topics that resonated with NGI's objectives. For instance, if an outlet focused solely on existing computer hardware and dedicated a large amount of content to video games, they would be considered a less suitable candidate for the database than a similarly-themed outlet that covered future technological developments or advertised events that dovetailed with NGI's scope (MyData, Slush, etc.)

Once both these refining efforts had been carried out a more manageable list was generated, which could then lead to direct phone contacts to help pinpoint exact areas of interest and the message-relaying potential of each profile. The organisation of the NGI Forum in Helsinki offered the perfect vehicle for contacting members of the database and adding or removing contacts in the list based on these conversations.

Mail delivery statuses were also a good way of removing contacts that were non-responsive or whose details were no longer accurate (see section 1.2.4, below).

1.2.3   Organising the data

Objective: to reach the right media contact depending on their interests

Lists of contacts currently exist in two forms: those generated and saved in the Cision software and the excel version of these lists extracted via Cision.

The excel sheets were not simply extracted: their content was reorganised to increase ease-of-use, with filters and a re-organising of the columns to make the search of contacts based on various criteria simpler and swifter.

We added personal contacts, research via desktop, and specific focus on Finland.

The data has been organised as follows:

- First Name
- Last Name
- Outlet Name
- Title
- Subjects
- Notes
- Profile
- Twitter handle
- Outlet UVPM
- Outlet Audience Reach
- Outlet Type
- E-mail

- Phone number
- Address
- Zip Code
- Contact Languages
- Outlet address
- Outlet City
- Outlet Zip code
- Outlet Country
- Outlet Website
- Outlet Profile
- Notes (section where results of contact and other details can be recorded)

The lists on Cision are also kept and updated when necessary (names removed or added based on fine-tuning efforts described in section 1.2.2, above).

1.2.4   Updating the database regularly

Following the initial fine-tuning efforts described in section 1.2.2 (above), the database was further updated in the run-up to the NGI Forum in Helsinki, where direct contact was established with persons on the list to gauge interest, boost participation and disseminate NGI information to their readers/viewers.

Another key update effort took place after the mass sending of the Press Release announcing the NGI Forum: an in-house software developed by Tipik was used to ensure these emails were not seen as spam by the recipients, while also tracking delivery and opening rates.

This allowed an update of the list to be performed based on mail delivery status, with delivery failures being investigated before being removed from the list when necessary.

As the NGI Outreach Office continues its communication efforts, notably in the lead-up to events (e.g. the next NGI Forum in 2020) but also following other events where NGI is represented (e.g. the IGF Forum 2019, where contacts were made on-site), the database can be updated.

As explained in section 1.2.1 (above), updates could also be carried out based on specific "ad-hoc" needs singled out by the European Commission's NGI team: communication efforts could be carried out surrounding a specific call (or group of calls with a similar deadline) or a given theme based on the Commission's priorities: the result of these more-focused, "bite-sized campaigns" would also feed into the general database and add new contacts (should these not yet be included for a given theme).

In the future, it is recommended to conduct any mass e-mailing efforts via Cision software, since the campaigning feature offers refined analytics which could also prove valuable when it comes to updating/modifying the database.

2 MEDIA DATABASE

See detailed list in Annex 1.

3 STAKEHOLDER'S DATABASE – HELSINKI

During the months leading to the NGI Forum 2019 in Helsinki, a stakeholders' database was created for the promotion of the NGI forum.

The following criteria's were used create the stakeholders database:

- Universities
- SME's and Start ups's in the ICT
- Research centers
- Researchers
- Other associations and networks

Those lists were personally contacted, with specific emails depending on their interest. This approach will be kept in the coming years.

See detailed list in Annex 2.

4 OBJECTIVES - YEAR 2

Given the conclusions reached in the Methodology section detailed above (namely sections 1.2.1 and 1.2.3), the second year should see the emergence of more specific, targeted lists of media contacts, based on key NGI-related themes.

The themes selected would serve two key objectives and would therefore be sub-divided into two main groups:

- Media-dissemination themes: through these themes, a series of media contact lists would be generated with the aim of disseminating information that is more general in nature (press releases, profile-raising campaigns, boosting event participation) in order to spread key NGI-related messages and content in a more refined (and therefore more impactful) way than the global, general list

- Call-driven themes: these themes would serve as a basis to create a series of media contact lists revolving around actual content of Calls (H2020 ICT, NGI RIAs Open Calls etc) these could be drawn up rapidly to fit a call that has just been published or is about to be published to target potential future NGI project participants as well as specialised stakeholders who could relay the information to relevant recipients

With this theme-driven approach in mind, the lists would be constructed around the following subjects:

4.1 MEDIA-DISSEMINATION THEMES

An initial list of themes under this category would be the following: Artificial Intelligence, Blockchain, Data Privacy, Internet of Things, Mobile Telecoms, Interactive Media, Medical Technology, Network Computing, New Media, Accessibility, Innovative Small Businesses, Wireless Technology, Cloud Computing, Databases, 5G

4.2 CALL-DRIVEN THEMES

Depending on the Call being promoted, the list used will at times be identical to the one used for more general media-dissemination (if a call focuses on "Data Privacy" in a general sense, for instance, then the Data Privacy media-dissemination list would be used as vehicle for sending out information). Many NGI Calls (Ledger, Zero Discovery, Trust…) focus on general issues such as data privacy and could therefore benefit from having the more targeted approach offered through using the media-dissemination list, rather than the global list.

Call-driven thematic lists would be drawn up with a specific call in mind and would, therefore be "tailored", in a sense. For instance, the NGI-related H2020 Call "ICT-57-2020" on "An empowering, inclusive Next Generation Internet" could have a bespoke, Call-driven list drawn up that brings together media contacts specialising in mobile applications, smartphones, disability and accessibility, while Call "ICT-56-2020" could have its own Call-driven list with media contacts specialising in 5G, Mobile Technology, Distributed Computing, Bluetooth and Wireless Technology, for instance.

5 GDPR

Tipik is committed to protecting the privacy of individuals. Tipik will always ensure that its data processing activities are in line with applicable data protection laws, including the EU General Data Protection Regulation 2016/679 and the Belgian Data Privacy Act of 8 December 1992 (FR/NL), as may be amended, restated and/or replaced from time to time.

The databases included in the deliverable are for information and reporting only and cannot be used by any third parties or European commission services. It cannot be shared nor uploaded in any online unsecured platform.

If you need to contact us for any reason (including to facilitate the exercise of any rights in relation to personal data in the context of NGI4ALL) please send your request to Tipik at 'info@tipik.eu' with marie-france.locus@tipik.eu in CC.

6 CONCLUSION

Following a first year of using the Cision tool, it has become apparent that Cision should be relied on more heavily going forward, notably for the dissemination act itself but also for analytics and reporting.

Efforts will be made to provide more powerful methods for tracking outreach of media campaigns and new methods are currently being examined by the NGI Outreach Office in order to be successfully deplored during Year 2.

The media database next year will include, on top of the global list, the different lists per thematic and per country.

NGI4ALL will also create the stakeholder's database for the next edition of the NGI Forum.

Stakeholders	Last name	First name	Function	E-mail adress	Link to contact details on the web	Comments (sector, subject of research, interests etc)
Attractive.ai				hello@attractive.ai	https://attractive.ai/team#	Attractive.ai's virtual UX expert analyses websites and makes improvement suggestions. The algorithms are based on user experience and usability research.
Utopia Analytics	HUUSKONEN	Janne	Media Inquiries	janne.huuskonen@utopiaanalytics.com	https://utopiaanalytics.com/contact/	AI moderator services, AI Consulting, AI Text Analytics Platform
Aiven	SAARENMAA	Oskari	Chief Executive Officer	os@aiven.io	https://aiven.io/about/#about-contact	A start-up that provides fully-hosted and managed cloud database and messaging products
Addsearch	ALA-ILKKA	Antti	Founder & CEO	antti@addsearch.com	https://www.addsearch.com/contact-us/	Search engine optimisation products and analytics
ICEYE	MODRZEWSKI	Rafal	CEO, Co-Founder	press@iceye.fi	https://www.iceye.com/lp/contact-us; press@iceye.fi	Global Satellite Monitoring. Develops SAR microsatellite for earth observation application including remote sensing imagery and access to SAR (synthetic aperture radar) data. The company also provides artificial intelligence-based analytics solutions.
Verto Analytics	VERKASALO	Hannu	CEO and Founder	marketing@vertoanalytics.com	https://www.linkedin.com/in/hannuverkasalo	provides cloud-based media measurement services with a focus on syndicated research and analytics
GetJenny	KINOS	Teemu	CEO & Co-Founder	pr@getjenny.com	https://www.getjenny.com/about-getjenny	GetJenny is using AI to help make the whole customer service experience better by allowing companies to set up their own personal customer service chatbot without technical expertise. The chatbot is available in over 30 languages and has been proven to be 2.5 times more efficient than the industry standard.
Happeo					https://www.happeo.com/contact-us	An intranet, enterprise social network, and collaboration platform to engage, inform and connect your global workforce.
Speechgrinder	HEIKINHEIMO	Hannes	CTO, co-founder	hello@speechgrinder.com	https://www.speechgrinder.com/contact-us/	APIs for developing next generation voice UIs in apps and websites
Nosto				marketing@nosto.com	https://www.nosto.com/contact/	AI-powered Ecommerce Intelligence Engine has been developed and refined over the past 7 years by a team of engineers, data scientists and PhDs.
Small Giant Games	SOININEN	Timo	CEO	contact@smallgiantgames.com	https://www.smallgiantgames.com/#contact	Gaming company founded in 2013. A crew of top players in game development, software engineering and graphic design.
Nordcloud	MÄKINEN	Jussi	Country Manager	jussi.makinen@nordcloud.com	https://nordcloud.com/contact/	Cloud services. A leader in public cloud infrastructure solutions and cloud native application services.
Huoleti	SAVIN	Carita	CEO, Co-Founder	carita@huoleti.fi info@huoleti.fi	https://www.huoleti.com/	It's a mobile app for ill, troubled or worried and their loved ones to find others, to ask for and receive help and share experiences easily. App originally developed for cancer patients to ask and get everyday help and peer support.

Company	Last Name	First Name	Title	Email	Website	Description
Silo AI	SARLIN	Peter	Chief Executive Officer	info@silo.ai	https://silo.ai/contact/	Largest private Artificial intelligence lab in the Nordics creating human-in-the-loop AI for clients globally.
SensorFU	KENTTÄLÄ	Mikko	CEO	contact@sensorfu.com	https://www.sensorfu.com/	SensorFu Ltd manufactures and sells advanced automatic security policy checks. SensorFu's first product, SensorFu Beacon, assures the isolation of computer networks.
Codescoop	DEL OLMO	Virginia	CEO, Co-Founder	hello@codescoop.com	https://codescoop.com/about	Codescoop's mission is to reduce software complexity and improve software quality by giving companies data-driven insights into their ever-evolving stacks. Codescoop provides analytics and visualizations about a company's code, both OSS and proprietary. Facilitating development teams in making data driven decision about code selection and usage. This to help accelerate time to market, increase R&D efficiency, drive down technical debt and analyze OSS programs.
Visuon	TANSKANEN	Jarmo	CEO and Founder	support@visuon.com	https://visuon.com/s/	Visuon provides a visual training tool using 360° Virtual Reality technology. Visual solutions provide engaging and fun experiences for end users. Gamified, interactive content will help increase a better understanding of your company's procedures and products.
Hubble	NURMI	Jani	CEO	jani.nurmi@hubble.fi	https://hubble.fi/#tekoalypalvelut	Hubble's mission is to make technology more human. Provides AI services among others.
Tecinspire	KIVIOJA	Teemu	CEO	teemu.kivioja@tecinspire.com	https://www.tecinspire.com/en/	Expert in utility apps, IoT, cloud & healthcare standards.
Vaisto	AITTOMÄKI	Ville	CEO	ville.aittomaki@vaisto.io	https://vaisto.io/contact-information-page/	Vaisto focuses on smart connected vehicles and machines & advanced manufacturing; the manufacturers as well as their supply chain. Their ambition is to help customers develop winning products and experiences leveraging a data-driven approach and machine intelligence.
Top Data Science				info@topdatascience.com	https://topdatascience.com/about/	Top Data Science is a data science company focusing on AI powered Computer Vision, Machine Learning and Analytics technologies and development services for corporate customers and technology companies.
Collective Crunch	LIPPONEN	Jarkko	CPO, Managing Director	info@collectivecrunch.com	http://www.collectivecrunch.com/contact/	CollectiveCrunch is a leader in AI for the forestry industry. We 'collect' climate, geo and process data to 'crunch' this information for deeper insights and prediction. Our Linda Forest product brings a step-change in prediction accuracy of forest inventories.
Fiksu Ruoka	JÄRVENSIVU	Juhani	CEO	juhani.jarvensivu@fiksuruoka.fi	https://www.fiksuruoka.fi/page/3/tietoa-yrityksesta	Fiksuruoka.fi is a Finnish startup that challenges traditional grocery market by selling surplus batches of food with large discounts in web store. The products are shipped all around Finland and the main goal is to reduce food waste that originates from mistakes in demand forecasting, changes in packages or short best before dates. Visionary business model combined with high expertise in digital marketing, growth hacking, procurement optimisation and service design have been keys for rapid growth.
Bear it	KARHU	Teemu	CEO	teemu.karhu@bearit.fi	https://bearit.fi/contact/	Consulting and Resourcing Services, Cloud services, web and mobile development, Geofencing and tracking, digital healthcare services.
Part Time Monkey				contact@parttimemonkey.com		Part Time Monkey is a Finnish indie games company founded in August 2015. We create casual games of all kinds and have fun while doing so. With 15+ published titles and over 50M downloads in 4 years, Part Time Monkey is completely self-reliant and has no outside funding.
Zaibatsu Interactive	PERTTOLA	Jussi	CEO		https://zaibatsu.fi/contact/	Game development, front-end development, application development
Hatch				contact@playhatch.com	https://playhatch.com/contact/	Hatch is an online game streaming platform that enables users to play, watch, and share games. Hatch is the cloud gaming service built for the always on, always connected 5G world,

Company	Last Name	First Name	Title	Email	Website	Description
Aito.ai				hello@aito.ai		Aito.ai is a predictive database for developers who value quick time to market. Aito replaces the current machine learning tools that have a steep learning curve and generate single-purpose models.
Teatime	SALLI	Sakari	CEO	sakari.salli@teatimeresearch.com	http://teatimeresearch.com/#contact	Teatime Research is a virtual and augmented reality studio with a passion for emerging technologies. Delivers products and services for virtual and augmented reality. Our strength lies in special know-how and expertise in user experience design.
Kapu Toys				hello@littlestargames.com; support@littlestargames.com	https://www.kaputoys.com/support-fi.php	Kapu Toys is the digital toy box filled with smiles! We create digital toys for iPad, iPhone and Android devices.
Futurice	VALTASOLA	Riku	Managing Director	riku.valtasola@futurice.com	https://www.futurice.com/office/helsinki	We help our clients unleash innovation through digital product design and build, emerging technology, agile software development and lean organisational change. -Unleash the potential of Artificial Intelligence in your industry -Create next gen. experiences with Machine Learning and Data Science -Boost your processes with Augmented and Virtual Reality -Create real end user value with well-designed IoT solutions and Cloud Technology
Curious AI	VALPOLA	Harri	CEO	info@cai.fi	https://thecuriousaicompany.com/	Curious AI builds easy to use tools for intelligent automation. Our AI solutions offer immediate savings over existing IT systems and processes. And the new intelligence unlocks completely new business opportunities for your organisation.
Ultimate.ai				contact@ultimate.ai	https://www.ultimate.ai/	Customer service AI products. Self-learning customer service bots that learn from agent behaviours.
Mvision	HASAN	Mahmudul	CEO and Founder	info@mvision.ai	https://mvision.ai/contact/	Artificial Intelligence in Medical Imaging. MVision's automatic segmentation and contouring software use breakthrough deep learning technology to power its artificial intelligence (AI) algorithms. MVision's AI team has an extensive background in building AI models and a commitment to using this technology to improve health care systems and patient outcomes.
3DBear	LEHTONEN	Kristo	CEO	kristo@3dbear.fi	https://www.3dbear.io/contact	Edtech company - Augmented reality, 3D printing for kids. 3DBear is operating at the cross section of 3D-printing, pedagogy and gamification.

Stakeholders	Last name	First name	Function	E-mail adress	Link to contact details on the web	Comments (sector, subject of research, interests etc)
VTT Technical Research Centre of Finland				info@vtt.fi	https://www.vttresearch.com/contact-info	State owned and controlled non-profit limited liability company, providing research and innovation services and information. Carries out research on e.g. Digital society and smart industry.
Helsinki-Aalto Center for Information Security (HAIC)				haic@aalto.fi	https://haic.fi/about/	HAIC is a strategic initiative set up by Aalto University and the University of Helsinki in June 2016 to ensure excellence in information security research and education.
Infotech Oulu	SAARAKKALA	Simo	Scientific Director, Professor	simo.saarakkala@oulu.fi	https://www.oulu.fi/infotech/contacts	Infotech Oulu consists of research groups carrying out research in various fields of modern information technology for developing and validating e.g. digital technologies, wireless sensors and networks, AI, machine vision and electronics for various application areas.
COMET (Tampere Research Centre for Journalism, Media and Communication)	VALASKIVI	Katja	Research Director	katja.valaskivi@tuni.fi	https://research.uta.fi/comet-en/contact/	Research Centre COMET combines practical orientation with an ambitious theoretical approach to the field of journalism, media and communication research since its founding in 1996. COMET is located at the Faculty of Information Technology and Communication Sciences (ITC) at Tampere University in Finland.
Tampere Research Center for Information and Media (TRIM)	VITELI	Jarmo	Director	jarmo.viteli@uta.fi	http://www.uta.fi/sis/trim/contact/index.html	The research strategy in TRIM focuses on the essential research challenges of the information society and aims at producing information that is widely applicable both in developing new information systems or experience based interactive media products and in understanding better the behaviour of the people working with information and media.
Finland Futures Research Centre (FFRC)	KASKINEN	Juha	Director	juha.kaskinen@utu.fi	https://www.utu.fi/en/university/turku-school-of-economics/finland-futures-research-centre/personnel	Finland Futures Research Centre (FFRC) is one of the few university departments devoted to futures research in the world. Jointly founded by three universities in Turku in 1992, the FFRC is a department within the Turku School of Economics at the University of Turku, Finland.
Nokia Center for Advanced Research (NCAR)	TARKOMA	Sasu	Director Professor	sasu.tarkoma@cs.helsinki.fi	https://www.cs.helsinki.fi/u/starkoma/	Director of the Nokia Center for Advanced Research. Sasu Tarkoma is also a professor at the Department of Computer Scinence at the University of Helsinki
Helsinki institute for Information Technology				hiit-info@hiit.fi		Helsinki Institute for Information Technology HIIT is a joint research institute of Aalto University and the University of Helsinki for basic and applied research on information technology.
